# 9000 Mk2 transmitter

# Pressure & hydrostatic level transmitter

#### **Description**

The 9000 pressure transmitter is designed to perform in the arduous conditions of today's industrial measurement applications.

Using temperature compensated, surface mount electronics and a ceramic capacitive sensor, the 9000 provides an accuracy of better than +/-0.1% of calibrated span and excellent long term stability. One field replaceable PCB covers the entire product range and provides simple calibration over the 10:1 rangeability limits.

Available with a wide variety of process connection materials and configurations, the series 9000 offers wider application versatility than many of its higher priced rivals.

#### 9000 transmitter

- Absolute and gauge pressure transmitters
- Good long-term stability
- Hygienic style fittings

#### **Features**

- 2 wire 24V dc loop powered
- 4 to 20mA output
- Accuracy +/- 0.1% of calibrated span
- Spans from 0.02 to 300 Bar
- 10:1 rangeability
- Ceramic capacitive sensor
- High overrange capability
- Temperature compensated
- Reverse polarity protection
- Wide range of process connections
- · Intrinsically safe option

#### Operation

At the heart of the 9000 is the Ceramic Capacitive Sensor (CCS). This ensures extremely low hysteresis, high repeatability and high overrange capabilities.

The CCS replaces the traditional metallic diaphragm and sensor assembly and provides outstanding resistance to chemical attack.

The CCS eliminates the need for oil filled isolation, ensuring better temperature stability and allowing process temperatures between -30°C to +125°C.

# Advantages of ceramic capacitive sensor technology

- · High overrange capability
- Better long term stability and overall performance.
- Low hysteresis and high repeatability.
- Highly corrosion resistant and no oil filling giving better temperature stability and eliminating process contamination.
- The CCS used in the 9000 series can directly withstand most process media with temperatures between -30°C and 125°C.

#### **Product overview**

The 9000 transmitter gives high performance with accuracy better than 0.1%, temperature compensation and excellent long term stability, the 9000 ensures precise and reliable measurement and is virtually maintenance free.

### Compact, low mass

Weighing less than one kilogram, the 9000 is designed for "direct to process" mounting hence reducing installation costs. The sensor housing contains the ceramic capacitance sensor and the electronics circuit board, all the components needed to produce an accurate and reliable measurement of the process.

# Protected from aggressive environments and processes

The transmitter is designed to withstand the harshest of environments. The housing is environmentally protected to the requirements of IEC IP67. Its rugged ceramic sensor is inherently capable of withstanding attack from most chemicals. Normal process temperature limits are -30 and +125°C, ambient temperature limits are -20 to +90°C (80°C EEx ia) Overrange limit is up to 5 times upper range limit, depending upon the sensor selected.

## Optional process connections

Where necessary, flanged or sanitary process connections of various materials are available suitable for use in food and beverage applications. Alternative process connections are available on request.

#### The Sensor

All members of the 9000 family use a Capacitive Ceramic Sensor (CCS), manufactured using an aluminium oxide ceramic. The sensor measuring range is determined by the thickness of the ceramic, this is precisely controlled during the manufacturing process. The CCS works like a capacitor with electrode surfaces on the inside comprising one measuring and one reference capacitor.

The surfaces of the capacitor are gold plated and linked to ASIC electronics. These electronics generate a signal proportional to the applied pressure, which is sent to the 4-20mA signal conditioner.

The ceramic sensor is a "dry cell" meaning no isolating diaphragm and fill fluid is needed. The process fluid acts directly onto the rugged, corrosion resistant sensor.

## Other members of the 9000 family

9710 - Cable suspended, submersible level.

9720 - Clamped, submersible level.

9780 - Pole mounted, submersible level.

9790 - Flange mounted submersible level

Notes: 1. Overrange limit of sensor shown. Process connection may reduce permitted overrange.

- 2. Temperature barrier recommended for hygienic application. Max. pressure stated is for connection, not sensor.
- 3. Used to reduce risk of condensation forming in electronics housing when combination of low process and high ambient temperature is possible. Also required when process temperature may exceed 90°C 4. Check relevant flange tables if temperature is greater than 50°C.
- 5. Not available on fixed flange versions
- 6. Fixed flange on Aluminium Bronze option
- 7. Chemraz® is a registered trademark of Green Tweed

# Notes:

Overrange limit of sensor shown. Process connection may reduce permitted overrange.
 Fixed flange on Aluminium Bronze option

## **Specification**

#### Functional

Process fluid: Liquid, gas & vapour Span adjustment: 10% to 100% of URL\* Two-wire, 4-20mA Output signal: Process temp. limits: See ordering information Power supply: 10-30 Vdc Ambient temp. limits: -20°C to +90°C R = 50 x (supply voltage - 10v) $\Omega$ Load resistance: (+80°C EEx ia) Measuring range: 0.01 to +300 bar Humidity limits: 0 to 100% RH Overrange limit: See ordering information Hazardous area certification: ATEX II 1 G and ATEX II 1 D EEx ia IIB T4  $(Ta = -30^{\circ}C \text{ to } +80^{\circ}C)$ 

#### Performance

Accuracy:
Stability:
Temperature effect:
+/- 0.1%• of calibrated span including linearity, hysteresis and repeatability
+/- 0.1% URL\* per 6 months
+/- 0.015% URL\* per °C (over ambient temperature range)
